Subject: boiler heat capacity max

Don, John, Greg,

Since the boiler heat capacity of 132.34 MMBTUH is estimated and not guaranteed by the vendor as indicated on page 9 of App B, and since emission calcs are dependent on this figure, please provide a figure that I can use as a maximum for a permit condition.

For example: Boiler shall be constructed to have a maximum heat input capacity of 135 MMBTUH.

I would then calculate emissions based on this figure.

Thank you for your assistance.

April
