# LYPTUS® :

## Premium Hardwood From Sustainably Managed Forests

**STRIKING A BALANCE** between human demands and environmental concerns is becoming increasingly important. While nature has been bountiful, we must also recognize its limitations. This is especially true with forest products, ever-popular because of their unique contribution to an enhanced standard of living.

Lyptus® represents a new concept in forest management. A premium-grade hardwood, Eucalyptus is grown in South America on highly productive plantations, interspersed with reintroduced indigenous trees to preserve native ecosystems. Wood is produced using proprietary technology and sustainable forestry practices. Thus, Lyptus® customers can feel good about using this premium-quality hardwood, and also be assured of continuous supplies throughout the foreseeable future.

# The Lyptus® Difference

Many factors distinguish Lyptus® from other hardwood species. A natural hybrid of *Eucalyptus grandis* and *E. urophylla*, Lyptus thrives in the warm climate of Brazil, permitting harvest in approximately 15 years as opposed to 50 to 70 years in colder regions.

It is processed using best-of-class technology, assuring a top-quality product. Ambitious development programs have resulted in wood characteristics considered most desirable by discriminating industrial customers. These include excellent workability, machining properties, density, finish tolerance and overall strength.

## Quality That Starts in the Forest

Only the best Eucalyptus seedlings are destined to become marketable lumber. Specially selected nursery plants are given new homes in the forests, and then patiently nurtured and pruned. When a Eucalyptus tree has matured enough to produce long lengths of clear wood, it is carefully harvested and processed.

## Ultra-Modern Processing Technology

Lyptus® is produced in a state-of-the-art sawmill. With a production capacity of 32 million board feet every year, the mill also features cutting-edge drying capabilities and extra-large-diameter saws. Sophisticated 50-compartment sorters perform first-stage classification. Then wood is kiln-dried, planed and dressed on both faces for consistency and dimensional stability.

- **Currently available in 4/4, 5/4, 6/4 and 8/4 thicknesses, with other thicknesses to follow.**
- **Protected by water-resistant packaging**
- **Uniform moisture content of 6 to 8 percent**

Lyptus® is manufactured to specific market requirements using leading-edge mechanization.

# A Wood for the Future

Superior quality, remarkable beauty and dependable supplies make Lyptus® an ideal hardwood for diverse high-end applications today and tomorrow, including:

- Furniture • Cabinets
- Architectural millwork

## Award-Winning Science

Lyptus® is manufactured by Aracruz Wood Products in the state of Bahia, Brazil, and distributed in North America through an exclusive agreement with Weyerhaeuser. For three decades Aracruz has been a global leader in sustainable forestry, and currently invests more than \$5 million every year in research and development. It maintains its own nurseries and seed banks, and has permanent monitoring in place to ensure optimal soil conditions, water quality and ongoing biodiversity. Aracruz was honored with the Marcus Wallenberg Prize from the international scientific community for advancements in the field of forestry.

## POWER with the Pros

**VALUE.** That's what sets Weyerhaeuser apart. Being one of the largest forest products companies in the world, we offer the most complete line of products across North America at highly competitive prices – along with creative logistics, manufacturing and marketing solutions that contribute to your success.

**Choosing Weyerhaeuser as your single-source supplier helps you:**

- Reduce costs, waste and call-backs
- Increase productivity and total quality
- Provide additional services to your customers

**This means you can have the power of Weyerhaeuser behind everything you do.**

# Services That Make You a Star

## Services available from most of our Customer Service Centers in the United States and Canada include:

- Dependable inventories in stock
- Just-in-time delivery throughout North America
- Materials cut to size
- Multi-disciplinary consulting
- Programs tailored to customer needs
- Technical engineering and problem-solving skills
- Transportation to multiple locations
- Unbeatable product availability

## Proven Marketing and Pull-Through Programs

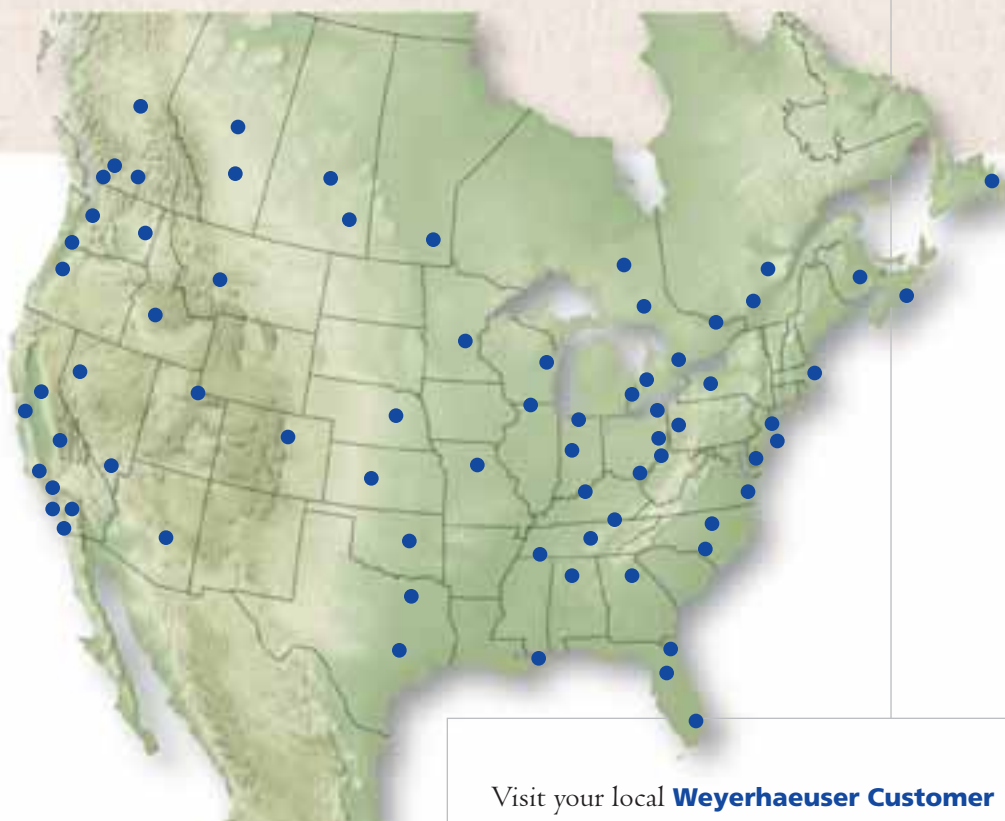

With Weyerhaeuser as your Lyptus® hardwood supplier, you get a lot more than just quality products delivered on time. Our representative becomes a member of your team, serving as a supply chain manager. We'll help you develop a strategic plan, design marketing campaigns, and find the best logistical solution. Customized engineering and design services include take-off consulting plus accurate product recommendation information – so Lyptus® becomes a logical choice for your customers.
